## News Release

### **Winglet Technology Delivers 100th Cessna Citation X Elliptical Winglet Retrofit Kit**

**Wichita, KS** — Winglet Technology recently delivered its 100th Elliptical winglet kit. The Elliptical winglets were installed at Yingling Aviation located at Eisenhower Mid-Continent Airport in Wichita, KS. Yingling Aviation recently became an authorized installation facility for Winglet Technology's Citation X Elliptical winglet STC.

Winglet Technology was originally granted the Supplemental Type Certificate (STC) for this retrofit program by the Federal Aviation Administration (FAA) in 2009, followed by the European Union Aviation Safety Agency (EASA) in 2010. Since then, the company has grown to include the Citation Sovereign, with its Transitional winglet STC approved in 2017.

Introduced as the world's fastest business jet in 1990, the Mach .92 Citation X was certified in 1996. Following FAA approval of the Citation X Winglet STC in June of 2009, Cessna announced the selection of Winglet Technology's design for the updated production version of the Citation X+ at the 2010 National Business Aviation Association Annual Meeting and Convention.

"It's great to have a facility like Yingling Aviation to work with, and they are conveniently located here in Wichita," said Bob Kiser, President of Winglet Technology.

"Performance benefits for the Citation Xs that have installed our winglets have been substantial," Kiser added. "For Citation X aircraft that incorporate the Elliptical Winglet STC, the winglets provide a 315 NM range increase when payload limited over a non-winglet Citation X. The overall consensus among Citation X operators is that the winglets enhance the lateral and directional stability of their airplanes."

### **About Winglet Technology**

Winglet Technology, LLC was founded in 2001 and holds Supplemental Type Certificates for its Citation X Elliptical Winglet Kit and Citation Sovereign Transitional Winglet Kit. The company is located at 8200 East 34th Street North, Suite 1410 in Wichita, Kansas.
